Olympic Games Analytics Dashboard (1896–2016) Report

1. Project Overview

This project presents a comprehensive analysis of the Olympic Games dataset from 1896 to 2016, covering both Summer and Winter Olympics. The dataset contains 271,616 rows with information on athletes, sports, countries, medals, and gender categories.

2. Objectives

- Analysing least played sport so as to emphasise development of that sport
- Identifying how particular sport has performed in terms of participation over time
- Identifying which athlete age group is top performing
- Analyze historical Olympic performance trends
- Study male vs female participation
- Evaluate country-wise and sport-wise medal distribution
- Identify top-performing athletes and nations
- Generate insights using interactive dashboards

3. Tools & Technologies

- Power BI
- Power Query
- Excel Dataset

4. Dashboards

1. Overview Dashboard
2. Male Athletes Dashboard
3. Female Athletes Dashboard
4. Gold Medal Analysis
5. Silver Medal Analysis
6. Bronze Medal Analysis

5. Key Insights

- Country-wise medal dominance
- Gender participation trends

• Top athletes across sports
• Historical Olympic performance evolution

6. Real-World Applications & Strategic Insights

This Olympic analysis can support real-world decision-making such as:

• Chief Guest Selection: Identifying top athletes for events based on achievements
• Sports Promotion: Encouraging participation by showcasing athlete journeys
• Women Empowerment: Identifying gender gaps to design sports schemes
• Policy Making: Helping governments introduce sports development programs
• National Sports Development: Improving infrastructure and training focus areas

7. Conclusion

This project provides a complete analytical view of Olympic Games history from 1896 to 2016, delivering insights into sports performance, gender participation, and global trends.
